

Neopuff™ T-Piece Resuscitator | 900 Series

International neonatal resuscitation guidelines recommend the use of a T-Piece resuscitator when a gas source is available. Compared to self-inflating and flow-inflating bags, T-Piece resuscitators like the Neopuff deliver a more controlled and consistent peak inspiratory pressure (PIP) and positive end-expiratory pressure (PEEP), which helps to protect the newborn's lungs, and maintain functional residual capacity (FRC).

Pressure vs time

The F&P Neopuff features an accurate, easy-to-read manometer, PIP control and maximum pressure relief valve. It can deliver oxygen levels from 21% to 100% from flow meters or a gas blender.
